

Health Content Check

How to install it in Claude. Step by step, about 5 minutes. You do not need any technical knowledge.

Before you start, you need three things

1. A Claude account, at claude.ai. Free, Pro, Max, Team and Enterprise all work.
2. The file **health-content-check.zip**, saved somewhere you can find it, such as your Downloads folder. **Do not unzip it**. Claude wants the zip.
3. A computer. This part cannot be done on a phone.

Part 1. Turn on the setting Claude needs

Skills do not appear at all until this is on, so do not skip it.

- 1 Go to **claude.ai** in your web browser and sign in.
- 2 Click your name or your initials in the **bottom left** corner.
- 3 Click **Settings**.
- 4 Click **Capabilities** in the menu on the left.
- 5 Find **Code execution and file creation** and turn it ON.

If it is already on, leave it alone and carry on. On a work account, your organisation owner may have to turn Skills on first.

Part 2. Add the checklist

- 6 In the menu on the left, click **Customize**, then **Skills**.
Shortcut: type claude.ai/customize/skills into your browser.
- 7 Click the **+** button.
- 8 Click **+ Create skill**.
- 9 Click **Upload a skill**.
- 10 Choose **health-content-check.zip** from where you saved it.
Pick the zip file itself. Do not open it, unzip it or re-zip it.
- 11 Wait a few seconds. **health-content-check** now appears in your list.
- 12 Check the toggle next to it is **on**. That is the install finished.

Part 3. Use it

- 13 Start a **new chat**.
- 14 Paste in the text of your page, or attach the document, then type:
Check this patient information page using the health content check.
- 15 Read what comes back, and fix the Required items first.

What you get back

Gate 0, is this information or is it marketing.

Required, what to fix before publishing, with the new wording written out for you.

Suggested and **Optional**, worth doing, in that order.

Only you can confirm, a short list left deliberately unticked. Those are the things no software can check, such as whether a real patient understood it.

Three things to try first

Copy any of these into a new chat.

Prompts

- Check this page for me, then tell me the three most important fixes. [paste your page]
- I am about to write a page for patients about [your topic]. Use the health content check as the checklist before I start.
- Give me the production process template and help me fill it in.

If something goes wrong

If this happens	Do this
You cannot find Skills anywhere	Code execution is still off. Go back to step 5. On a work account, ask whoever administers it to turn Skills on.
The upload is rejected	You have probably unzipped the file, or zipped it again yourself. Download a fresh copy and upload it without opening it.
Claude does not seem to use it	Say the name out loud in your message: Use the health content check skill on this page.
It is there but greyed out	Code execution is off, or on a work account your administrator controls it.

One thing to be clear about

This is a **self-check**. It does not certify anything, and it gives you no badge, tick or logo to put on your website.

Quality marks are awarded by schemes that assess how you produce content over time, not by anything that looks at a single page. If you want one, apply to the scheme.

What you can honestly say is that your content is written to the NHS standard for creating health content. That is true and it is worth saying.

Menus change. If what you see does not match this guide, the current version is at github.com/alistairphillips1/health-content-check
